ALI B.R.S., HAZLEWOOD G.P., GILBERT H.J.;

The non-catalytic cellulose-binding domain of a novel cellulase
pseudomonas fluorescens subsp. cellulosa is important for the
efficient hydrolysis of Avicel.";
BIOCHEM. J. 309:749-756(1995).

```
hydrolysis of 1,4-beta-D-glucosidic linkages in
beta-D-glucans such as cellulose and lichenin; can
hydrolyze such linkages in beta-D-glucans that also contain
1,3-linkages
cellulose degradation
glycosidase; hydrolase; polysaccharide degradation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Guiseppi, A.; Cami, B.; Aymeric, J.L.; Ball, G.; Creuzet, N. Mol. Microbiol. (1988) 2:159-164
Homology between endoglucansez Z of Erwinia chrysanthemi and endoglucanases of Bacillus subtilis and alkalophilic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 793; DB 2; Length 428;

GEN. MICROBIOL. 137:1729-1736(1991).

-!- FUNCTION: HAS ENDOGLICANASE ACTIVITY ON CARBOXYMETHYL-
CELLULOSE (CMC), XYLAN AND LICHENAN, BUT NOT AVICEL.

-!- CATALYTIC ACTIVITY: ENDOHYDROLYSIS OF 1,4-BETA-D-GLUCOSIDIC
LINKAGES IN CELLULOSE.
